A reading companion for your Mac.

Select a passage on your Mac and Glossbeam opens an explanation beside it. Pin the answer, ask a follow-up, or revisit earlier selections in your local history.

Availability

The notarized Mac beta (0.1.3) runs on Intel and Apple silicon Macs with macOS 14 or later. The iPhone and iPad companion is in private preview and requires iOS or iPadOS 18 or later.

Pricing

The Mac beta is free with your own Anthropic API key. Anthropic bills you for usage. The hosted Mac plan includes 2,500 credits per month. Mac + Companion adds iPhone and iPad pairing and includes 7,500 credits per month. See glossbeam.com/pricing for prices and current availability.

How it works

Choose when text is sent. With your own key, requests go directly from the Mac to Anthropic. A paired companion can show the same answers over the local network. You can manage saved notes and history on your Mac.
